

We run **48-hour build sprints** on real problems, so you can see how AI-native talent actually works.

A CV tells you what someone did. An interview tells you what they rehearsed. Neither tells you how a person works with AI on a problem they've never seen before. Forty eight hours watching builders work your real problem does, and you keep the prototypes.

01 WHAT BRINGS YOU HERE

You're hiring AI talent

For a team scaling fast, the cost of a wrong hire isn't just salary, it's months of onboarding and a seat that should have gone to a builder. Find AI-native people by watching them work your real problem, not by reading what they claim. You leave with a shortlist ranked on what you saw them do.

You're solving a workflow

You have a workflow that's breaking and suspect AI could fix it, but don't know where to start or who to trust to build it. Consultants sell you a strategy deck. What you need is someone who ships. See what AI can actually do for your workflow, in a working prototype you can test, before committing to anything larger.

02 HOW IT WORKS

01

Bring a real problem

A genuine workflow from inside your business, plus a point of contact. Optionally any APIs, data, or tools.

02

We run everything

Talent sourcing, curation, event operations, judging, and post-event signal mapping. You bring the problem; we run the loop.

03

48 hours, live

Builders work in teams of 3 to 5, pitch outcomes, and interact with your team throughout. You watch how they think.

04

Walk away with signal

Working prototypes, live demos, direct observation, and a curated shortlist, within 3 to 4 weeks of kickoff.

03 WHY A LIVE BUILD BEATS A CV

HUMAN SIGNAL	CV	INTERVIEW	LIVE BUILD
Agency under ambiguity	Invisible	Partial	Observable
Learning velocity	Weak	Partial	Strong
AI collaboration fluency	Claimed	Discussed	Demonstrated
Team influence	Invisible	Weak	Observable
Iteration speed	Invisible	Partial	Observable
Problem framing	Weak	Discussed	Demonstrated

The CV says what they did. A live build shows how they think.

AI changed the job. Hiring hasn't caught up. In the UK the average hire now takes 8 weeks, and even then 52% of tech leaders still can't find the AI skills they need, the steepest talent shortage in over 15 years.¹

04 THE NETWORK YOU'RE REACHING

2,000+

Reachable builders across 6 fields

400+

Existing community members

~70

Fellows selected from ~300 applicants

23%

Acceptance in an already screened pool

Reached directly through ties to top university societies at Oxford, Cambridge, Imperial, UCL, LSE, KCL, LBS and Stanford, and shaped by the founding team that designed, filled, and ran the Stanford ASES London Bootcamp end to end.

05 TALENT WE FOUND BEFORE THE MARKET COULD

APPLIED AI · AGENTS

Enterprise agent-reliability platform

Built an SDK and dashboard to monitor, replay and halt AI agents in production.

Progress working product; demand validated across 24 enterprise conversations.

Recognition won UCL AI Buildfest, judged by 30 industry judges and sponsored by NVIDIA; founder selected to Founders, Inc.

SPORTS TECHNOLOGY

Combat-sports performance wearable

Built a wrist sensor tracking punch type, count, form, speed and fatigue, plus an AI coach.

Progress working hardware and software, grounded in 50+ athlete interviews, 87% of whom wanted tracking.

Recognition founders now build this alongside roles at a top-tier investment bank and a pharmaceutical company.

06 SAFEGUARDS

NDAs — signed before any problem details are shared with participants.

IP — ownership agreed in writing before kickoff.

Your data — scoped, anonymised, or synthetic. You choose what to share.

Participants — every builder is application screened and bound by a code of conduct.

No hiring obligation — the shortlist is yours. What you do with it is up to you.

THE ASK

£5,000 flat, one curated live-build event

From kickoff to delivery in 3 to 4 weeks. Pilot pricing; larger or multi-sprint engagements scoped case by case. We price the first sprint to make the decision easy, and earn the relationship on results.
